Can import file w/ log ==using "path"==

Can cd and then ==import delimited using "file name"==

                ↑csv   ↑ or Path

Can also import using GUI

Summary statistics   Statistics → summary

==Summarize== Pop

==Histogram== Pop

==gen== lnPop = ln(Pop)   ← create variable

==replace== logPop = log10(Pop)   ← mutate

==drop== lets you drop variables

==help "command"==

==cor== = correlation

==cor var1 var2==

history → select all → right click send do-file

add ==,replace== to first line then ==clear all== on new line. At bottom, add ==log close==

==translate "Path" name.pdf==
